

Your eTrial Partner

Application Made Simple

Whether they are paper-based or electronic – documents are the crucial interface for information and data exchange in the context of clinical trials. Trium's eClinical Trial philosophy is to make these documents and their content »smarter«, while maintaining the integrity of the established processes.

We will not allow ourselves or our clients to be led by fascinating technical possibilities into misinterpreting technical progress as an approach to solutions. We believe that technology must invariably be linked to content, and that is why our »Clinical-Trial Engine« is primarily driven by our extensive specialist experience and practical know-how.

Scope of Services

Together with its partners Trium offers the full range of service from planning to analysis of your clinical trials, registries, benchmarking and quality management projects.

In detail we offer according to your needs on an international basis

- study planning with innovative design;
- efficient application of remote data entry;
- SAS programming;
- analysis, reporting and controlling;
- monitoring and projectmanagement;
- advice in clinical and regulatory issues;
- medical writing and quality assurance;

The application of state-of-the-art database and communication technology goes without saying.

Added Value through Partnership

Together with its partners, Trium offers full service in the field of clinical research.

- one contractual partner, a single point of contact;
- proven experts for every sub-field: no loss of quality in sub-fields;
- you only buy the services you actually need, i.e. loss-making activities do not have to be cross-subsidized;
- efficient organisational structure, low overheads;
- pricing policy commensurate with the quality, yet still competitive.

The most important cooperation partners in the Trium network are: FGK Clinical Research GmbH, Sylvia Lawry Centre for Multiple Sclerosis Research.

References and Quality Standards

»Clinical-Trial Engine« has been used successfully in running clinical trials since 1999. We are proud of the speed, accuracy and efficiency that contribute to the success of these projects – just as we are proud of the long-term customer relationships we have established over the years.

We work flexibly, competently and reliably to fulfil your individual requirements to your complete satisfaction.

Trium has a clear customer focus, is highly dependable and professional, and applies a fair pricing policy.

All the services we offer are of the same convincing quality, with a guarantee for:

- better overall picture of trials and patient data;
- high and transparent data quality;
- efficient data management and monitoring;
- immediate availability of data and benchmarks;
- better controllability of projects due to effective use of resources;
- satisfied doctors due to simple handling
